Rules:

1. Cannot place a stone on an existing stone
2. Alternate between white and black
3. 9x9 grid (. for empty grids)

Grid: 9 lists of 9 inside a single list

Placing a move:

1. Ask for input (position)
2. Have a turns variable (white if odd black if even) (increases every turn)
3. Check if position already has stone
4. If not update position to include stone
5. If yes give error message

Rules for input
Ask for Y position (0-8)
Ask for X position (0-8)

Exiting a game:
Game runs until exit condition is met (press 9)

When Whites turn white make a move
When Blacks turn black make a move

Rules for the game

- Sides will alternate putting x and y coordinates from 0 - 8
- If a space is already occupied the user will have to try again
- When the user is ready to exit the game press 9

Algorithm

1. Prompt black to input x and why coordinates
2. Check if coordinates are in range or if = 9 (stops the game)
3. If in range then check if space is already occupied

4. If all the conditions are met then replace the list element with a black or white stone
5. Print the board
6. Have a variable increase by 1 (odd numbers black, even numbers white) (print message indicating whos turn it is accordingly)
